Bob The Skeleton

Built by: Bobs builders(Laken, James, Cecil) 10/11/2026

Game explanation

Playing as bob you evade/defeat enemy skeletons then you explore the level and either find upgrades or you advance to the exit. Then you do it again in order to gain enough and items to beat the gravekeeper and reach bobs grave.

The target aesthetics are challenge and discovery

The game largely follows the story of a skeleton named Bob who was raised to life by a nefarious gravekeeper. We don’t know why he has done this, but our objective follows Bob traversing the cemetery to return to his grave. At the end, there will be a boss battle that requires players to defeat the gravekeeper and ensure that Bob can return to a long rest.

Scope

The game will absolutely feature Bob, battleesque behavior, map layout connectedness

The game will be improved if we are able to deliver on implementing RPG elements, powerup, Inventory management

The Game will not be turn based

Design Detail

Movement: produced movable characters

Battle: Allows for character to fight other sprites . enemies will be broken into types, each type with different behaviors. Like one that roams like a pac man sprite until its in range, one that travels faster through the map to find the player etc.

Item Management: allows for players to pick up and utilize items when it's convenient

Roadmap

The prototype will contain Bob the skeleton and his ability to move around the game world/ grid. The alpha will contain one map with functioning basic enemies, the beta will contain multiple maps with more advanced enemies

Risks

Risk number 1 RPG elements, optional upgrades that follow Bob throughout the game if the player goes out of their way to find them- credit Laken

Risk number 2 Good level designs that feel accomplishable

Risk number 3 Soulslike, the gravekeeper can be beaten at any time however the journey bob takes will make this task easier, this means that the gravekeeper must have difficult however feasible difficulty and combat capability that is simply made easier by the gathering of items throughout the game.-credit Laken

Logistics

We will use the Bobs house of games repo to post prototypes and changes along with updates to the read me, allowing for communication/record of what is being changed along with where and when it is being changed. The plan for assets is primarily to use free game assets available on CraftPix. Beyond this there is some possibility of in house pixel art but only as a secondary resort.
